LV8

The LV-Series controllers are designed to operate multiple low-voltage chain hoist motors in a wide range of staging and rigging applications, with switched power outlets and separate control lines. All units have a variety of linkable Remote Control and Emergency Stop options and are fully automation-ready.

LV6 and LV12 feature 3-way mixed control and power on female Socapex-style (Ceep) connectors, LV8 provides separate 4-way control and power on pairs of male and female Socapex connectors. Rugged design, durable switching hardware, all housed in a compact 3U 19" rack mount chassis suited to touring or installation.

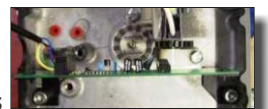

LV6

LV-Series are ideal for all Low-Voltage controlled hoists such as CM Lodestars and Prostars

CM Hoist Optical Encoders

- ◆ High resolution bi-phase output gives direction and position control (single phase also available)
- ◆ One-tonne and half-tonne versions

DV4

The DV4 and DV8 are designed to operate four or eight Direct Control chain hoist motors in staging and rigging applications, with internal contactors to provide direction control by switching phase rotation. All units have a variety of linkable Remote Control and Emergency Stop options and are fully automation-ready.

DV4 features heavy-duty CForm outlets while DV8 uses Socapex-style (Ceep) multipin connectors. Rugged design, durable switching hardware, all housed in a compact 3U 19" rack mount chassis suited to touring or installation.

DV-Series are ideal for all direct control hoists such as Verlinde, Chainmaster or new CM direct control variants.
